

Real Analysis

Sebastian Müksch, v2, 2018/19

Convergence

Remark [Wade 7.2].

Let $S \subseteq \mathbb{R}$, non-empty. A sequence of functions f_n **converges pointwise** if $\forall \varepsilon > 0, x \in S \exists N \in \mathbb{N}$ s.t.:

$$n \geq N \Rightarrow |f_n(x) - f(x)| < \varepsilon.$$

Theorem [Wade 7.9].

Let $S \subseteq \mathbb{R}$, non-empty, and suppose $f_n \rightarrow f$ **uniformly** on S as $n \rightarrow \infty$. Then *each* f_n continuous at $x_0 \in S \Rightarrow f$ continuous at $x_0 \in S$.

Theorem [Wade 7.10].

Suppose $f_n \rightarrow f$ **uniformly** on closed interval $[a, b]$. Then *each* f_n integrable on $[a, b] \Rightarrow f$ integrable on $[a, b]$ and

$$\lim_{n \rightarrow \infty} \int_a^b f_n(x) dx = \int_a^b \left(\lim_{n \rightarrow \infty} f_n(x) \right) dx$$

Lemma [Wade 7.11] (Uniform Cauchy Criterion).

Let $S \subseteq \mathbb{R}$, non-empty, and $f_n : S \rightarrow \mathbb{R}$ a sequence of functions. Then f_n **converges uniformly** on $S \Leftrightarrow \forall \varepsilon > 0 \exists N \in \mathbb{N}$ s.t.:

$$n, m \geq N \Rightarrow |f_n(x) - f_m(x)| < \varepsilon, \quad \forall x \in S.$$

Theorem [Wade 7.12].

Let (a, b) be a bounded interval and f_n converging at some $x_0 \in (a, b)$. Each f_n is differentiable on (a, b) and f'_n converges **uniformly** on $(a, b) \Rightarrow f_n$ converges uniformly on (a, b) and

$$\lim_{n \rightarrow \infty} f'_n(x) = \left(\lim_{n \rightarrow \infty} f_n(x) \right)'$$

Exercise 7.1.3.

Let the sequence of $f_n : S \rightarrow \mathbb{R}$ be bounded and let $f_n \rightarrow f$ uniformly. Then f is bounded and moreover, sequence f_n is **uniformly** bounded.

Exercise 7.1.5.

Let $f_n \rightarrow f$ and $g_n \rightarrow g$ uniformly as $n \rightarrow \infty$ on $S \subseteq \mathbb{R}$. Then

- $f_n + g_n \rightarrow f + g, \alpha f_n \rightarrow \alpha f$ **uniformly** on S as $n \rightarrow \infty$, for all $\alpha \in \mathbb{R}$;
- $f_n g_n \rightarrow f g$ **pointwise** on S ;
- if f, g **bounded**, then $f_n g_n \rightarrow f g$ **uniformly** on S ;
- if g unbounded, c) is false.

Exercise 7.1.9.

Let f, g be **continuous** on **closed & bounded interval** $[a, b]$ with $|g(x)| > 0$ for all $x \in [a, b]$. Let $f_n \rightarrow f$ and $g_n \rightarrow g$ **uniformly** on $[a, b]$. Then

- $1/g_n$ is defined for large n and $f_n/g_n \rightarrow f/g$ **uniformly** on $[a, b]$;
- a) is false if $[a, b]$ is replaced with (a, b) .

Exercise 7.1.10.

Let $S \subseteq \mathbb{R}$, non-empty, f_n sequence of **bounded** functions on S s.t. $f_n \rightarrow f$ **uniformly**. Then

$$\frac{f_1(x) + \dots + f_n(x)}{n} \rightarrow f(x)$$

uniformly on S .

Theorem [Wade 7.14].

Let $S \subseteq \mathbb{R}$, non-empty, $f_n : S \rightarrow \mathbb{R}$.

- Let each f_n be continuous at $x_0 \in E \Rightarrow$. Then $f = \sum_{n=1}^{\infty} f_n$ converging **uniformly** $\Rightarrow f$ **continuous** at x_0 .
- Suppose $S = [a, b]$ and each f_n be integrable on $[a, b]$. Then $f = \sum_{n=1}^{\infty} f_n$ converging **uniformly** on $[a, b] \Rightarrow f$ **integrable** on $[a, b]$ and

$$\int_a^b \left(\sum_{n=1}^{\infty} f_n(x) \right) dx = \sum_{n=1}^{\infty} \int_a^b f_n(x) dx.$$

- Suppose S is **bounded, open interval** and each f_n differentiable on S . $\sum_{n=1}^{\infty} f_n$ convergent at some $x_0 \in S$ and $\sum_{n=1}^{\infty} f'_n$ **uniformly** convergent on $S \Rightarrow$ $f := \sum_{n=1}^{\infty} f_n$ **uniformly** convergent on S , f **differentiable** on S and

$$\left(\sum_{n=1}^{\infty} f_n(x) \right)' = \sum_{n=1}^{\infty} f'_n(x)$$

for $x \in S$.

Theorem [Wade 7.15] (Weierstrass M-Test).

Let $S \subseteq \mathbb{R}$, non-empty, and $f_n : S \rightarrow \mathbb{R}$. Suppose $M_n \geq 0$ satisfies $\sum_{n=1}^{\infty} M_n < \infty$. If $\forall n \in \mathbb{N}, x \in S : |f_n(x)| \leq M_n$, then $\sum_{n=1}^{\infty} f_n$ **converges absolutely and uniformly** on S

Workshop 2, Question 7.

Let $f_n : \mathbb{R} \rightarrow \mathbb{R}$ be a sequence of **continuous** functions converging **uniformly** to f . Let (x_n) be a sequence in \mathbb{R} s.t. $x_n \rightarrow x \in \mathbb{R}$. Then $f_n(x_n) \rightarrow f(x)$.

Power Series

Theorem [Power Series, Thrm. 1].

Let R be radius of convergence of $\sum_{n=0}^{\infty} a_n(x-c)^n$.

- $|x-c| < R \Rightarrow$ series **converges absolutely**;
- $|x-c| > R \Rightarrow$ series **diverges**.

Exercise (Radius of Convergence).

- If $\lim_{n \rightarrow \infty} \left| \frac{a_n}{a_{n+1}} \right|$ exists, then it is radius of convergence;
- If $\lim_{n \rightarrow \infty} |a_n|^{-\frac{1}{n}}$ exists, then it is radius of convergence.

Theorem [Power Series, Thrm. 2].

Let $R > 0$, then $\sum_{n=0}^{\infty} a_n(x-c)^n$ converges **uniformly & absolutely** on $|x-c| < R$ to a continuous function f , i.e.:

$$f(x) = \sum_{n=0}^{\infty} a_n(x-c)^n$$

defines a continuous function $f : (c-R, c+R) \rightarrow \mathbb{R}$.

Lemma [Power Series].

$\sum_{n=0}^{\infty} a_n(x-c)^n$ and $\sum_{n=0}^{\infty} na_n(x-c)^{n-1}$ have the same radius of convergence.

Theorem [Power Series, Thrm. 3].

Suppose $\sum_{n=0}^{\infty} a_n(x-c)^n$ has radius of convergence R . Then

$$f(x) = \sum_{n=0}^{\infty} a_n(x-c)^n$$

is **infinitely differentiable** on $|x-c| < R$ and for such x :

$$f'(x) = \sum_{n=0}^{\infty} na_n(x-c)^{n-1}$$

and the series converges **uniformly & absolutely** on $[c-r, c+r]$ for any $r < R$. Additionally

$$a_n = \frac{f^{(n)}(c)}{n!}.$$

Remark [Power Series].

Analytic functions are **infinitely differentiable** on $\{x \in \mathbb{R} : |x-c| < r\}$ and the coefficients of the power series are **uniquely** determined by $a_n = f^{(n)}(c)/n!$.

Exercise 7.2.2.

The geometric series

$$\sum_{n=0}^{\infty} x^n = \frac{1}{1-x}$$

converges **uniformly** on any $[a, b] \subset (-1, 1)$.

Exercise 7.3.3.

Let $\sum_{k=0}^{\infty} \infty a_k x^k$ have radius of convergence R . Then

- $\sum_{k=0}^{\infty} \infty a_k x^{2k}$ has radius of convergence \sqrt{R}
- $\sum_{k=0}^{\infty} \infty a_k^2 x^k$ has radius of convergence R^2

Exercise 7.3.4.

Let $|a_k| \leq |b_k|$ for **large** k and $\sum_{k=0}^{\infty} \infty b_k x^k$ converges on **open** interval I . Then $\sum_{k=0}^{\infty} \infty a_k x^k$ converges on I .
Hint: Supremum Definition.

Exercise 7.3.5.

Let (a_k) be **bounded** sequence of real numbers. Then $\sum_{k=0}^{\infty} \infty a_k x^k$ has **positive** radius of convergence.

Riemann Integration

Workshop 3, Question 5.

Let $I \subseteq \mathbb{R}$ be an open interval, $f : I \rightarrow \mathbb{R}$ **differentiable** with f' **bounded** on I . Then f is **uniformly** continuous.

Workshop 3, Question 7.

Let $I \subseteq \mathbb{R}$ be an open interval and let $f : I \rightarrow \mathbb{R}$ continuous. Then f **uniformly** continuous \Leftrightarrow whenever sequences $(s_n), (t_n)$ in I are s.t. $|s_n - t_n| \rightarrow 0$, then $|f(s_n) - f(t_n)| \rightarrow 0$.

Workshop 3, Question 8.

Let $f : [a, b] \rightarrow \mathbb{R}$ continuous. Then f is **uniformly** continuous.

Exercise (Step Function Vector Space).

The class of step functions is a vector space. Moreover, if ϕ and ψ are step functions, then $\max\{\phi, \psi\}$, $\min\{\phi, \psi\}$, $|\phi|$ and $\phi\psi$ are also step functions.

Exercise (Characterising Step Functions).

Function ϕ is a **step function** $\Leftrightarrow \phi$ is of form:

$$\phi(x) = \sum_{j=1}^n c_j \chi_{I_j}(x)$$

where each I_j is a **bounded interval**.

Lemma (Set Independence).

Let ϕ be a step function. Then $\int \phi$ is **independent** of the particular set $\{x_0, x_1, \dots, x_n\}$ with respect to which ϕ is a step function.

Proposition [Integration, Prop. 1].

Let ϕ, ψ be step functions, $\alpha, \beta \in \mathbb{R}$. Then

$$\int (\alpha\phi + \beta\psi) = \alpha \int \phi + \beta \int \psi.$$

Exercise (Integral Ordering).

Let ϕ, ψ be step functions. Then $\phi \leq \psi \Rightarrow \int \phi \leq \int \psi$.

Theorem [Integration, Thrm. 1].

Let $f : \mathbb{R} \rightarrow \mathbb{R}$. Then f **Riemann-integrable** \Leftrightarrow

$$\sup \left\{ \int \phi : \phi \text{ step function, } \phi \leq f \right\} = \inf \left\{ \int \psi : \psi \text{ step function, } \psi \geq f \right\}.$$

Theorem [Integration, Thrm. 2].

Let $f : \mathbb{R} \rightarrow \mathbb{R}$. Then f is **Riemann-integrable** \Leftrightarrow there exist sequences of step functions ϕ_n and ψ_n s.t. $\forall n \in \mathbb{N} : \phi_n \leq f \leq \psi_n$ and

$$\int \psi_n - \int \phi_n \rightarrow 0.$$

If ϕ_n and ψ_n are any sequences of step functions satisfying the above, then

$$\int \phi_n \rightarrow \int f \quad \text{and} \quad \int \psi_n \rightarrow \int f$$

as $n \rightarrow \infty$.

Exercise (Sum of Powers Estimate).

Let $n \in \mathbb{N}$, then for any integer $m \geq 1$:

$$\frac{n^{m+1}}{m+1} \leq \sum_{j=1}^n j^m \leq \frac{(n+1)^{m+1}}{m+1}$$

Lemma [Integration, Lem. 1].

Let $f : \mathbb{R} \rightarrow \mathbb{R}$ be **bounded** with **bounded support** $[a, b]$. Then the following is equivalent:

- (i) f is **Riemann-integrable**;
- (ii) $\forall \varepsilon > 0 \exists a = x_0 < \dots < x_n = b$ s.t. if

$$M_j = \sup_{x \in I_j} f(x), \quad m_j = \inf_{x \in I_j} f(x)$$

where $I_j = [x_{j-1}, x_j]$, then

$$\sum_{j=1}^n (M_j - m_j)(x_j - x_{j-1}) < \varepsilon;$$

- (iii) $\forall \varepsilon > 0 \exists a = x_0 < \dots < x_n = b$ s.t., with $I_j = [x_{j-1}, x_j]$ for $j \geq 1$:

$$\sum_{j=1}^n \sup_{x, y \in I_j} |f(x) - f(y)| |I_j| < \varepsilon.$$

Theorem [Integration, Thrm. 3].

Let f, g be **Riemann-integrable**, $\alpha, \beta \in \mathbb{R}$. Then

- (a) $\alpha f + \beta g$ is **Riemann-integrable** and

$$\int (\alpha f + \beta g) = \alpha \int f + \beta \int g;$$

- (b) $f \geq 0 \Rightarrow \int f \geq 0$ and $f \geq g \Rightarrow \int f \geq \int g$;
- (c) $|f|$ is **Riemann-integrable** and

$$\left| \int f \right| \leq \int |f|;$$

- (d) $\max\{f, g\}$ and $\min\{f, g\}$ are **Riemann-integrable**;
- (e) $f g$ is **Riemann-integrable**

Theorem [Integration, Thrm. 4].

Let $g : [a, b] \rightarrow \mathbb{R}$ be **continuous**, $f(x) = g(x)$ if $x \in [a, b]$, $f(x) = 0$ if $x \notin [a, b]$. Then f is **Riemann-integrable**.

Theorem [Integration, Thrm. 5].

Let $g : [a, b] \rightarrow \mathbb{R}$ be **Riemann-integrable**. For $x \in [a, b]$ let

$$G(x) = \int_a^x g.$$

Then g **continuous** at some $x \in [a, b] \Rightarrow G$ **differentiable** at x and $G'(x) = g(x)$.

Theorem [Integration, Thrm. 6].

Let $f : [a, b] \rightarrow \mathbb{R}$ s.t. f has **continuous** derivative f' on $[a, b]$. Then

$$\int_a^b f' = f(b) - f(a).$$

Exercise (Integral Test).

Let (a_n) be a **non-negative** sequence of numbers and $f : [1, \infty) \rightarrow (0, \infty)$ s.t.

- (i) $\int_1^n f \leq K$ for some K and all n and
- (ii) $a_n \leq f(x)$ for $n \leq x < n+1$.

Then $\sum n a_n$ converges to a real number which is at most K .

Exercise (p-Series Test).

For $p > 1$, $\sum 1/n^p$ converges.

Workshop 5, Question 1.

Let $f : \mathbb{R} \rightarrow \mathbb{R}$ be **Riemann-integrable**. Then f is **bounded** with **bounded support**.

Workshop 5, Question 7.

Let $g : [a, b] \rightarrow \mathbb{R}$, $a < b$, be **continuous** and **non-negative**. Then $\int_a^b g = \Rightarrow g = 0$ on $[a, b]$.

Exercise 5.2.0 (b).

Let f be **Riemann-integrable**, P **any polynomial**, then $P \circ f$ is **Riemann-integrable**.

Hint: f R-integrable $\Rightarrow f^n$ is R-integrable by Thrm. 3 linearity.

Exercise 5.2.6.

(a) Let $g_n \geq 0$ sequence of **Riemann-integrable** functions on $[a, b]$ s.t.

$$\lim_{n \rightarrow \infty} \int_a^b g_n = 0$$

Then f **Riemann-integrable** on $[a, b] \Rightarrow$

$$\lim_{n \rightarrow \infty} \int_a^b f g_n = 0$$

Hint: f is bounded $\Rightarrow f g_n$ is bounded & Squeeze Thrm.

Metric Spaces

Example [Wade 10.2].

Every Euclidean space \mathbb{R}^n is a metric space with the **usual metric** $\rho(\vec{x}, \vec{y}) = \|\vec{x} - \vec{y}\|$.

Definition [Wade 10.3].

\mathbb{R} is a metric space with the **discrete metric**:

$$\sigma(x, y) = \begin{cases} 0 & x = y, \\ 1 & x \neq y \end{cases}$$

Example [Wade 10.4].

Let (X, ρ) be a metric space and $E \subseteq X$. Then E is a metric space with metric ρ , called a **subspace** of X .

Exercise 10.4.10a.

$E \subset X$ **compact** $\Rightarrow E$ **sequentially compact**.

Hint: Arbitrary $x \in$,

$S = \{n \in \mathbb{N} : x_n \in B_{r(x)}(x)\}$ must be finite for (x_n) not to have convergent subsequence. E has open cover $\{B_r(x_i) : 1 \leq i \leq k\} \Rightarrow \exists i$ s.t. $B_r(x_i)$ infinite \Rightarrow contradicts S finite.

Example [Wade 10.6].

Let $\mathcal{C}[a, b]$ be the set of **continuous** functions $f : [a, b] \rightarrow \mathbb{R}$ and

$$\|f\| := \sup_{x \in [a, b]} |f(x)|$$

Then $\rho(f, g) := \|f - g\|$ is a metric on $\mathcal{C}[a, b]$. N.B.: Convergence in this metric spaces means **uniform** convergence.

Remark [Wade 10.9].

Every open ball is **open**, every closed ball is **closed**.

Remark [Wade 10.10].

Let $a \in X$. Then $X \setminus \{a\}$ is **open** and $\{a\}$ is **closed**.

Remark [Wade 10.11].

Let (X, ρ) be an **arbitrary** metric space. Then \emptyset and X are **both open & closed**.

Example [Wade 10.12].

Every subset of **discrete** space \mathbb{R} is **both open & closed**.

Theorem [Wade 10.14].

Let X be a metric space.

- i) A sequence in X can have **at most one** limit.
- ii) If $\{x_n\}$ in X converges to a and $\{x_{n_k}\}$ is **any subsequence** of $\{x_n\}$, then $\{x_{n_k}\}$ converges to a as well.
- iii) $\{x_n\}$ in X is **convergent** $\Rightarrow \{x_n\}$ is **bounded**
- iv) $\{x_n\}$ in X is **convergent** $\Rightarrow \{x_n\}$ is **Cauchy**

Remark [Wade 10.15].

Let $\{x_n\}$ in X . Then $x_n \rightarrow a$ as $n \rightarrow \infty \Leftrightarrow$ for **every open set** V s.t. $a \in V \exists N \in \mathbb{N}$ s.t. $n \geq N \Rightarrow x_n \in V$.

Theorem [Wade 10.16].

Let $E \subseteq X$. Then E is **closed** \Leftrightarrow the limit of **every convergent** sequence $\{x_k\}$ in E **lies in** E , i.e.:

$$\lim_{k \rightarrow \infty} x_k \in E$$

Remark [Wade 10.17].

The discrete space contains **bounded** sequences with have **no convergent subsequences**, e.g. $\{k\}$ with $k \in \mathbb{N}$.

Remark [Wade 10.18].

The metric space \mathbb{Q} with usual metric contains **Cauchy sequences** which do **not converge**, e.g. $\{q_k\}$ in \mathbb{Q} s.t. $q_k \rightarrow \sqrt{2}$.

Exercise 10.1.4.

In **discrete** metric space, $x_n \rightarrow a$ as $n \rightarrow \infty \Leftrightarrow x_n = a$ for n large.

Exercise 10.1.5.

Let x_n, y_n sequences in (X, ρ) converge to same limit $a \in X$. Then $\rho(x_n, y_n) \rightarrow 0$ as $n \rightarrow \infty$. The **converse** is **false**, e.g. $x_n = y_n = n$.

Exercise 10.1.6.

Let (x_n) be **Cauchy** in X . Then (x_n) **converges** $\Leftrightarrow (x_n)$ has a **convergent subsequence**.

Remark [Wade 10.20].

If X is a **complete** metric space, then

- 1) **every Cauchy** sequence in X **converges**;
- 2) the limit of **every Cauchy** sequence in X **stays in** X .

Theorem [Wade 10.21].

Let X be a **complete** metric space and $E \subseteq X$. Then E is **complete** $\Leftrightarrow E$ is **closed**.

Remark (Cluster Point in Subspace).

Let $E \subseteq X$ be a **subspace** of X . The $a \in E$ is a **cluster point** in $E \Leftrightarrow \forall \delta > 0$, the **relative ball** $B_\delta(a) \cap E$ contains **infinitely** many points.

Theorem [Wade 10.26].

Let $a \in X$ be a **cluster point** and $f, g : X \setminus \{a\} \rightarrow Y$.

- i) $\forall x \in X \setminus \{a\} : f(x) = g(x)$ and $f(x)$ has a limit as $x \rightarrow a \Rightarrow g(x)$ has a limit as $x \rightarrow a$ and

$$\lim_{x \rightarrow a} g(x) = \lim_{x \rightarrow a} f(x).$$

- ii) **Sequential Characterization of Limits:**

$$L := \lim_{x \rightarrow a} f(x)$$

exists $\Leftrightarrow f(x_n) \rightarrow L$ as $n \rightarrow \infty$ for *every* sequence $\{x_n\}$ in $X \setminus \{a\}$ s.t. $x_n \rightarrow a$ as $n \rightarrow \infty$.

- iii) Let $Y = \mathbb{R}^n$. $f(x)$ and $g(x)$ have a limit as $x \rightarrow a \Rightarrow (f+g)(x), (fg)(x), (\alpha f)(x)$ and if $Y = \mathbb{R}$ and limit of $g(x) \neq 0$ also $(f/g)(x)$ have limits. In this case, the usual algebra of limits applies.

- iv) **Squeeze Theorem:** Let $Y = \mathbb{R}$. Let $h : X \setminus \{a\} \rightarrow \mathbb{R}$ s.t. $\forall x \in X \setminus \{a\} : g(x) \leq h(x) \leq f(x)$ and

$$\lim_{x \rightarrow a} g(x) = \lim_{x \rightarrow a} f(x) = L$$

\Rightarrow limit of h as $x \rightarrow a$ exists and

$$\lim_{x \rightarrow a} h(x) = L.$$

- v) **Comparison Theorem:** Let $Y = \mathbb{R}$. $\forall x \in X \setminus \{a\} : f(x) \leq g(x)$ and f, g have a limit as $x \rightarrow a$, then

$$\lim_{x \rightarrow a} f(x) \leq \lim_{x \rightarrow a} g(x).$$

Theorem [Wade 10.28].

Let $E \subseteq X$, non-empty, and $f, g : E \rightarrow Y$.

- i) f *continuous at* $a \in E \Leftrightarrow f(x_n) \rightarrow f(a)$ as $n \rightarrow \infty$ for *every* sequence $\{x_n\}$ in E s.t. $x_n \rightarrow a$.
- ii) Let $Y = \mathbb{R}^n$. f, g *continuous at* $a \in E \Rightarrow f+g, fg, \alpha f$, for $\alpha \in \mathbb{R}$ are *continuous at* $a \in E$. Also, if $Y = \mathbb{R}$ and $g(a) \neq 0$, then f/g *continuous at* $a \in E$.

Theorem [Wade 10.29].

Let X, Y, Z be metric spaces and $a \in X$ a *cluster point*. Let $f : X \rightarrow Y, g : f(X) \rightarrow Z$. $f(x) \rightarrow L$ as $x \rightarrow a$ and g *continuous at* $L \Rightarrow$

$$\lim_{x \rightarrow a} (g \circ f)(x) = g \left(\lim_{x \rightarrow a} f(x) \right).$$

Exercise 10.2.2.

Let (X, d) be a metric space.

- a) $a \in X$ *isolated* $\Leftrightarrow a$ *not cluster point* in X .
- b) Discrete metric space has *no cluster points*.

Hint: a) (\Leftarrow) not cluster $\Rightarrow B_r(a)$ finitely many elements, take ρ minimum of distance of those to a , then $X \cap B_\rho(a) = \{a\}$.

Exercise 10.2.3.

Let $E \subseteq X$. Then a is a *cluster point* \Leftrightarrow there *exists* sequence (x_n) in $E \setminus \{a\}$ s.t. $x_n \rightarrow a$ as $n \rightarrow \infty$.

Hint: $(\Rightarrow) x_n \in E \cap B_{\frac{1}{n}}(a), (\Leftarrow) E \cap B_r(a)$ infinite as $a \neq x_n$.

Exercise 10.2.4.

- a) Let $E \subseteq X$, non-empty. Then a is a *cluster point* for $E \Leftrightarrow \forall r > 0 : (E \cap B_r(a)) \setminus \{a\} \neq \emptyset$.
- b) Every *bound infinite subset* of \mathbb{R} has *at least one* cluster point.

Hint: a) $(\Leftarrow) x_n \in (E \cap B_{\frac{1}{n}}(a)) \setminus \{a\}$ and Ex. 10.2.3. b) (x_n) sequence in E and Bolzano-Weierstrass.

Workshop 7, Question 5.

Metrics d, ρ *strongly equivalent* $\Rightarrow d, \rho$ *equivalent*.

Workshop 7, Question 7.

Let d, ρ be metrics on X . Then d, ρ *equivalent* \Leftrightarrow *every* subset of X *open* with respect to d is *also open* with respect to ρ and *vice-versa*.

Workshop 8, Question 11.

X *compact* $\Rightarrow \forall r > 0, X$ can be covered by *finitely* many open balls of radius r .

Hint: Consider open cover of open balls of radius r .

Workshop 8, Question 12.

Let X be *compact*. Then X is *complete*.

Additionally, X *compact* $\Leftrightarrow X$ is *complete and* can be covered by finitely many open balls of radius r for any $r > 0$.

Hint: X compact \Rightarrow sequentially compact, so (x_n) Cauchy sequence has convergent subsequence (x_n) converges.

Workshop 8, Question 13.

X *compact* $\Leftrightarrow X$ *sequentially compact*.

Hint: Take (x_n) Cauchy, has convergent subsequence by assumption \Rightarrow converges $\Rightarrow X$ complete. Only need show that \exists cover with finite number open balls. Assume none exists for $r > 0$. Pick $x_1 \in X$. Pick $x_2 \in X$ s.t. $d(x_1, x_2) > r$, repeat to get (x_n) s.t. $d(x_m, x_n) > r \forall m, n \Rightarrow$ not convergent \Rightarrow contradiction.

Topology

Theorem [Wade 10.31].

Let X be a metric space.

- i) The *union* of *any collection* of *open* sets in X is *open*;
- ii) The *intersection* of a *finite collection* of *open* sets in X is *open*;
- iii) The *intersection* of *any collection* of *closed* sets in X is *closed*;
- iv) The *union* of a *finite collection* of *closed* sets in X is *closed*;
- v) Let $V \subseteq X$ be *open*, $E \subseteq X$ be *closed*. Then $V \setminus E$ is *open*, $E \setminus V$ is *closed*.

Remark 10.32.

The *intersection* of *any collection* of *open* sets is *not* necessarily *open*, e.g.

$$\bigcap_{k \in \mathbb{N}} \left(-\frac{1}{k}, \frac{1}{k} \right) = \{0\}.$$

The *union* of *any collection* of *closed* sets is *not* necessarily *closed*, e.g.

$$\bigcup_{k \in \mathbb{N}} \left[\frac{1}{k+1}, \frac{k}{k+1} \right] = (0, 1).$$

Theorem [Wade 10.34].

Let $E \subseteq X$. Then

- i) $E^\circ \subseteq E \subseteq \overline{E}$;
- ii) V *open* and $V \subseteq E \Rightarrow V \subseteq E^\circ$.
- iii) C *closed* and $C \supseteq E \Rightarrow C \supseteq \overline{E}$.

Theorem [Wade 10.39].

Let $E \subseteq X$. Then $\partial E = \overline{E} \setminus E^\circ$.

Theorem [Wade 10.40].

Let $A, B \subseteq X$. Then

- i) $(A \cup B)^\circ \supseteq A^\circ \cup B^\circ, (A \cap B)^\circ = A^\circ \cap B^\circ$;
- ii) $\overline{A \cup B} = \overline{A} \cup \overline{B}, \overline{A \cap B} \subseteq \overline{A} \cap \overline{B}$;
- iii) $\partial(A \cup B) \subseteq \partial A \cup \partial B,$
 $\partial(A \cap B) \subseteq (A \cap \partial B) \cup (B \cap \partial A) \cup (\partial A \cap \partial B).$

Exercise 10.3.4.

Let $A \subseteq B \subseteq X$. Then $\overline{A} \subseteq \overline{B}$ & $A^\circ \subseteq B^\circ$.

Remark [Wade 10.43].

The empty set and *all finite* subsets of a metric space are *compact*.

Remark 10.44.

Every *compact* set is *closed*.

Hint: Assume H compact & not closed $\Rightarrow \exists$ sequence with limit x not in H . $y \in H$ and $r(y) := \rho(x, y)/2, x \neq H \Rightarrow r(y) > 0$. Open cover of $B_{r(y)}(y)$ w/ finite subcover $\{B_{r(y_j)}(y_j)\}$. $r = \min\{r(y_j)\}$. $x_k \rightarrow x \Rightarrow x_k \in B_r(x)$ for k large. $x_k \in B_r(x) \cap H \Rightarrow x_k \in B_{r(y_j)}(y_j)$ for some j . Then with $r_j \geq \rho(x_k, y_j) \geq \rho(x, y_j) - \rho(x_k, x) = 2r_j - \rho(x_k, x) > 2r_j - r \geq 2r_j - r_j \Rightarrow$ contradiction.

Remark [Wade 10.46].

Every *closed subset* of a *compact* set is *compact*.

Hint: $E \subseteq H$ closed w/ H compact s.t. \mathcal{V} is open cover of E . $E^c = X \setminus E$ open $\Rightarrow \mathcal{V} \cup E^c$ cover H . H compact \Rightarrow finite subcover \mathcal{V}_0 and $H \subseteq E^c \cup \mathcal{V}_0$, but $E \cap E^c = \emptyset \Rightarrow \mathcal{V}_0$ finite subcover of E .

Theorem [Wade 10.46].

Let $H \subseteq X, X$ being a metric space. H *compact* $\Rightarrow H$ *closed* & *bounded*.

Remark 10.47.

Given an *arbitrary* metric space, *closed* & *bounded* \nRightarrow *compact* in general.

Exercise 10.4.2.

Let $A, B \subseteq X$ be *compact*. Then $A \cup B$ and $A \cap B$ are *compact*.

Hint: Combine subcovers for $A \cup B$; note $A \cap B \subset A$ closed & Thrm. 10.46.

Exercise 10.4.3.

Let $E \subseteq \mathbb{R}$ be *compact* and non-empty. Then $\sup E$ and $\inf E$ belong to E .

Hint: Existence by boundedness.

Approximation Property gives

$\sup E \leq x_n \leq \sup E + 1/n$ and Squeeze Theorem.

Exercise 10.4.8.

(a) **Cantor Intersection Theorem:** Let $H_{k+1} \subseteq H_k$ be *nested* sequence of *compact, non-empty* sets in metric space X . Then $\bigcap_{k=1}^\infty H_k \neq \emptyset$.

Hint: Assume $\bigcap_{k=1}^\infty H_k = \emptyset$. $\{H_k^c\}$ open cover of $H_1 \Rightarrow$ finite subcover $H_{k_i}, 1 \leq i \leq n$. H_k nested $\Rightarrow H_k^c$ nested $\Rightarrow s = \max\{k_i\}$ then $H_1 \subset H_s^c \Rightarrow \emptyset = H_s \cap H_1 = H_s$, contradiction.

Remark [Wade 10.55].

Let $E \subseteq X$. If $\exists A, B \subseteq X$, both *open* s.t.

$$E \subseteq A \cup B, \quad A \cap B = \emptyset$$

$$A \cap E \neq \emptyset, \quad B \cap E \neq \emptyset$$

i.e. A, B *separate* E , then E is *not connected*.

Theorem [Wade 10.56].

$E \subseteq \mathbb{R}$ is *connected* $\Leftrightarrow E$ is an *interval*.

Remark (Preimage of Open Balls).

Let X, Y be metric spaces and $f : X \rightarrow Y$.

Then f is *continuous* \Leftrightarrow

$$B_\delta(a) \subseteq f^{-1}(B_\epsilon(f(a))).$$

Theorem [Wade 10.58].

Let $f : X \rightarrow Y$. Then f *continuous* $\Leftrightarrow f^{-1}(V)$ is *open* in X for *every open* V in Y .

Hint: $(\Rightarrow) f^{-1}(V)$ non-empty, let $a \in f^{-1}(V)$, i.e. $f(a) \in V \Rightarrow$ choose ϵ s.t. $B_\epsilon(f(a)) \subseteq V$. f continuous \Rightarrow choose δ s.t.

$B_\delta(a) \subseteq f^{-1}(B_\varepsilon(f(a)))$. (\Leftrightarrow) $\varepsilon > 0, a \in X$.
 $V = B_\varepsilon(f(a))$ open and by assumption $f^{-1}(V)$ open. $a \in f^{-1}(V) \Rightarrow \exists \delta > 0$ s.t.
 $B_\delta(a) \subseteq f^{-1}(V) \Rightarrow f$ continuous.

Corollary [Wade 10.59].

Let $E \subseteq X$ and $f : E \rightarrow Y$. Then f **continuous** on $E \Leftrightarrow f^{-1}(V) \cap E$ is **relatively open** in E for every open V in Y .

Remark (Continuous Inverse Invariance).

Open & Closed sets are invariant under inverse images by **continuous** functions.

Exercise 10.5.5.

Let $E \subseteq X$ and $E \subseteq A \subseteq \bar{E}$ and E **connected**. Then A is **connected**.

Hint: Assume A disconnected then Remark 10.55 for A . $U \cap E \neq \emptyset$ by contradiction $\Rightarrow \exists x \in U$ s.t. $x \in A \setminus E$. $A \subset \bar{E} \Rightarrow x$ cluster point of $E \Rightarrow \exists r > 0$ s.t. $B_r(x) \subset U$ with infinitely many points from E so $E \cap U \neq \emptyset$. Similarly $E \cap V \neq \emptyset \Rightarrow$ contradicts E connected.

Exercise 10.5.11.

Let $\{E_\alpha\}_{\alpha \in A}$ collection of **connected** sets s.t. $\bigcap_{\alpha \in A} E_\alpha \neq \emptyset$. Then $\bigcup_{\alpha \in A} E_\alpha$ is **connected**.
Hint: Contradiction and Remark 10.55.

Theorem [Wade 10.61].

$H \subseteq X$ **compact** and $f : H \rightarrow Y$ **continuous** $\Rightarrow f(H)$ **compact** in Y .

Theorem [Wade 10.62].

$E \subseteq X$ **connected** and $f : E \rightarrow Y$ **continuous** $\Rightarrow f(E)$ **connected** in Y .

Theorem [Wade 10.63] (Extreme Value Theorem).

Let $H \subseteq X$, **non-empty** & **compact** and $f : H \rightarrow \mathbb{R}$ **continuous**. Then

$$M := \sup\{f(x) : x \in H\},$$

$$m := \inf\{f(x) : x \in H\}$$

are **finite real** numbers and $\exists x_M, x_m \in H$ s.t. $M = f(x_M)$ and $m = f(x_m)$.

Theorem [Wade 10.64].

Let $H \subseteq X$ be **compact** and $f : H \rightarrow Y$ **injective (1-1)** & **continuous**. Then f^{-1} is **continuous** on $f(H)$.

Workshop 11, Question 2-5.

Every **open, connected** set in \mathbb{R}^n is **path-connected**.

Hint: U set of $x, y \in E$ s.t. path exists, V s.t. does not. Show $E \subset U \cup V$, $U \cap V = \emptyset$, $U \cap E \neq \emptyset$. U is path-connected. Show U, V are open, $y \in U$ and as E open $B_r(y) \subseteq E$, let $z \in B_r(y)$ then x, z path-connected as x, y are. Similar reasoning for V open.

Exercise 10.6.5 (Intermediate Value Theorem).

Let $E \subseteq X$ be **connected**, $f : E \rightarrow \mathbb{R}$ **continuous** and $a, b \in E$ with $f(a) < f(b)$. Then $\forall y$ s.t. $f(a) < y < f(b)$ $\exists x \in E$ s.t. $f(x) = y$

Hint: E connected, f continuous $\Rightarrow f(E)$ connected and as subset of \mathbb{R} is interval, so $[f(a), f(b)] \subset f(E)$. So $f(a) < y < f(b) \Rightarrow y \in f(E)$.

Exercise 10.6.9.

Let X be **connected**. Then $f : X \rightarrow \mathbb{R}$ **non-constant, continuous** $\Rightarrow X$ **uncountably** many points.

Hint: Connected subsets in \mathbb{R} are intervals (a, b) and $g : (a, b) \rightarrow X$ is injective, so $g((a, b)) \subset X$ same size as (a, b) .

Contraction Mappings

Exercise [Contraction Mapping].

Let f be a **contraction**. Then f is **continuous**.

Theorem (Banach's Contraction Mapping Theorem).

Let (X, d) be a **complete** metric space, $f : X \rightarrow X$ a **contraction**. Then there **exists unique** $x \in X$ s.t. $f(x) = x$.

N.B.: It is important that $f(X) \subseteq X$.

Hint: Pick $x_0 \in X$ and $f(x_n) = x_{n+1}$ as contraction $\Rightarrow d(x_n, x_{n+1}) \leq \alpha^n d(x_0, x_1)$. Use triangle inequality & finite geometric series to show $d(x_m, x_n) \leq \frac{\alpha^n}{1 - \alpha} d(x_0, x_1) \Rightarrow (x_n)$

Cauchy, as X complete $\Rightarrow (x_n)$ converges to $x \in X$. f continuous $\Rightarrow f(x) = f(\lim x_n) = \lim f(x_n) = \lim x_{n+1} = x$. Uniqueness: $x, y \in X$, $f(x) = x$ & $f(y) = y \Rightarrow d(x, y) = d(f(x), f(y)) \leq \alpha d(x, y) \Rightarrow d(x, y) = 0$.

Exercise [Contraction Mapping].

Let (X, d) be a **complete** metric space and $f : X \rightarrow X$ s.t. $f^{(n)} = f \circ f \circ \dots \circ f$ a **contraction**. Then f has a **unique fixed point**.
 N.B.: f itself may not be a contraction.

Workshop 10, Question 8.

Let (X, d) be **compact** and $f : X \rightarrow X$ s.t. $d(f(x), f(y)) \leq d(x, y)$ for all $x \neq y \in X$. Then f has a **unique** fixed point.

Hint: $\phi(x) = d(x, f(x))$, continuous, so image is closed & bounded subset of \mathbb{R} as X compact. f without fixed point $\Rightarrow \phi > 0$ and $\inf \phi = k > 0$ and $\exists x \in X$ s.t. $d(x, f(x)) = k$. $d(f(x), f(f(x))) < d(x, f(x)) = k$, contradicts k infimum.

Miscellaneous

Remark (Geometric Sum).

$$\sum_{k=0}^n r^k = \frac{1 - r^{n+1}}{1 - r}$$

Remark Product to Sum (

$)$. $fg = \frac{1}{4}((f+g)^2 - (f-g)^2)$
 N.B.: Used in proof of Cauchy-Schwarz for functions.

Definitions

Convergence

Definition [Wade 7.1].

Let $S \subseteq \mathbb{R}$, non-empty. A sequence of functions $f_n : S \rightarrow \mathbb{R}$ **converges pointwise** on $S \Leftrightarrow f(x) = \lim_{n \rightarrow \infty} f_n(x)$ exists for each $x \in S$.
 N.B.: N may depend on x .

Definition [Wade 7.7].

Let $S \subseteq \mathbb{R}$, non-empty. A sequence of functions $f_n : S \rightarrow \mathbb{R}$ **converges uniformly** on S to function $f \Leftrightarrow \forall \varepsilon > 0 \exists N \in \mathbb{N}$ s.t.:

$$n \geq N \Rightarrow |f_n(x) - f(x)| < \varepsilon, \quad \forall x \in S.$$

N.B.: N independent of x .

Definition (Ex. 7.1.3).

Let $f_n : S \rightarrow \mathbb{R}$ be a sequence of functions. If $\exists M > 0 \forall x \in S, n \in \mathbb{N}$ s.t. $|f_n(x)| \leq M$, then the sequence of functions is **uniformly bounded**.

Definition [Wade 7.13].

Let $S \subseteq \mathbb{R}$, $f_k : S \rightarrow \mathbb{R}$ and $s_n(x) := \sum_{k=1}^n f_k(x)$, for $x \in S, n \in \mathbb{N}$.

- $\sum_{k=1}^\infty f_k$ converges **pointwise** on $S \Leftrightarrow$ sequence $s_n(x)$ converges pointwise on S ;

- $\sum_{k=1}^\infty f_k$ converges **uniformly** on $S \Leftrightarrow$ sequence $s_n(x)$ converges uniformly on S ;
- $\sum_{k=1}^\infty f_k$ converges **absolutely (pointwise)** on $S \Leftrightarrow$ sequence $\sum_{k=1}^\infty |f_k|$ converges for each $x \in S$.

Power Series

Definition (Power Series).

Let (a_n) be sequence of real numbers, $c \in \mathbb{R}$. A **power series** is a series of the form:

$$\sum_{n=0}^\infty a_n(x - c)^n$$

where a_n are the **coefficients**, c is the **centre**.

Definition (Radius of Convergence).

The **radius of convergence** R of power series $\sum_{n=0}^\infty a_n(x - c)^n$ is

$$R = \sup\{r \geq 0 : (a_n r^n) \text{ is bounded}\}$$

unless $(a_n r^n)$ is bounded for all $r \geq 0$, then $R = \infty$. I.e. R is **unique** number s.t. for $r < R$, $(a_n r^n)$ is bound, for $r > R$, $(a_n r^n)$ is unbound.

Definition (Analytic Function).

A function f is **analytic** on $S = \{x \in \mathbb{R} : |x - c| < r\}$ if there is a power series centred at c that converges to f on S .

Riemann Integration

Definition (Uniform Continuity).

Let $I \subseteq \mathbb{R}$ be an interval, $f : I \rightarrow \mathbb{R}$. We say f is **uniformly continuous** on I if $\forall \varepsilon > 0 \exists \delta > 0$ s.t. for $x, y \in I$:

$$|x - y| < \delta \Rightarrow |f(x) - f(y)| < \varepsilon$$

Definition (Characteristic Function).

Let $E \subseteq \mathbb{R}$, then $\chi_E : \mathbb{R} \rightarrow \mathbb{R}$ is the **characteristic function** if $\chi_E(x) = 1$ if $x \in E$, $\chi_E(x) = 0$ if $x \notin E$.

Definition (Area Under the Curve).

Let $I \subset \mathbb{R}$ be a **bounded interval**. Then

$$\int \chi_I = \text{length}(I).$$

Definition [Integration, Def. 1].

We say $\phi : \mathbb{R} \rightarrow \mathbb{R}$ is a **step function** if there exist real numbers $x_0 < x_1 < \dots < x_n$, for some $n \in \mathbb{N}$, s.t.

- $\phi(x) = 0$ for $x < x_0$ and $x > x_n$;
- ϕ constant on (x_{j-1}, x_j) , $1 \leq j \leq n$.

Definition (Bounded Support).

A function f has **bounded support** if $f(x) = 0$ for $x \notin [c, d]$, where $[c, d]$ is some bounded interval.

Definition [Integration, Def. 2].

Let ϕ be a step function with respect to $\{x_0, x_1, \dots, x_n\}$, where $\phi(x) = c_j$ for $x \in (x_{j-1}, x_j)$, then

$$\int \phi := \sum_{j=1}^n c_j(x_j - x_{j-1}).$$

Definition [Integration, Def. 3].

Let $f : \mathbb{R} \rightarrow \mathbb{R}$. Then f is **Riemann-integrable** if $\forall \varepsilon > 0 \exists \phi, \psi$ step functions s.t. $\phi \leq f \leq \psi$ and

$$\int \psi - \int \phi < \varepsilon.$$

Definition [Integration, Def. 4].

If f is **Riemann-integrable**, then we define:

$$\int f := \sup \left\{ \int \phi : \phi \text{ step function, } \phi \leq f \right\} = \inf \left\{ \int \psi : \psi \text{ step function, } \psi \geq f \right\}.$$

Definition (Definite Integral).

Let $f : I \rightarrow \mathbb{R}$, where I is **bounded interval** open/closed at end points $a \leq b$. Let $\tilde{f}(x) = f(x)$ for $x \in I$ and $f(x) = 0$ for $x \notin I$. \tilde{f} **Riemann-integrable** $\Rightarrow f$ **Riemann-integrable on I** and

$$\int_I f = \int_a^b f = \int_a^b f(x) dx := \int \tilde{f}$$

is the **definite integral of f on I** .

Definition (Improper Integral).

Let $f : \mathbb{R} \rightarrow \mathbb{R}$ be **possibly unbounded**, let

$$f_n(x) = \text{mid}\{-n, f(x), n\} \chi_{[-n, n]}(x)$$

and

$$F_n(x) = \min\{|f(x)|, n\} \chi_{[-n, n]}(x)$$

If $\sup_n \int F_n < \infty$, then the **improper integral of f over interval I** is

$$\int_I f := \lim_{n \rightarrow \infty} \int_I f_n.$$

Metric Spaces

Definition [Wade 10.1].

A **metric space** is a set X together with a function $\rho : X \times X \rightarrow \mathbb{R}$ (the **metric** of X) which satisfies the following properties for $x, y, z \in X$:

- (i) **Positive definite:** $\rho(x, y) \geq 0$ with $\rho(x, y) = 0 \Leftrightarrow x = y$;
- (ii) **Symmetric:** $\rho(x, y) = \rho(y, x)$;
- (iii) **Triangle Inequality:** $\rho(x, y) \leq \rho(x, z) + \rho(z, y)$

N.B.: $\rho(x, y)$ is finite valued by definition.

Definition [Wade 10.7].

Let $a \in X$ and $r > 0$. The **open ball** (in X) with **centre** a and **radius** r is the set

$$B_r(a) := \{x \in X : \rho(x, a) < r\}$$

and the **closed ball** (in X) with **centre** a and **radius** r is the set

$$\{x \in X : \rho(x, a) \leq r\}$$

Definition [Wade 10.8].

- i) A set $V \subseteq X$ is **open** $\Leftrightarrow \forall x \in V \exists \varepsilon > 0$ s.t. open ball $B_\varepsilon(x) \subseteq V$.
- ii) A set $E \subseteq X$ is **closed** \Leftrightarrow complement $E^c := X \setminus E$ is **open**.

Definition [Wade 10.13].

Let $\{x_n\}$ be a sequence in X .

- i) $\{x_n\}$ **converges** (in X) if $\exists a \in X$ (the **limit** of x_n) s.t. $\forall \varepsilon > 0 \exists N \in \mathbb{N}$ s.t.:
$$n \geq N \Rightarrow \rho(x_n, a) < \varepsilon.$$
- ii) $\{x_n\}$ is **Cauchy** if $\forall \varepsilon > 0 \exists N \in \mathbb{N}$ s.t.:
$$n, m \geq N \Rightarrow \rho(x_n, x_m) < \varepsilon.$$

- iii) $\{x_n\}$ is **bounded** if $\exists M > 0, b \in X$ s.t.

$$\rho(x_n, b) \leq M, \quad \forall n \in \mathbb{N}.$$

Definition [Wade 10.19].

A metric space X is **complete** \Leftrightarrow **every Cauchy** sequence $\{x_n\}$ in X **converges** to some point **in** X .

Definition [Wade 10.22].

A point $a \in X$ is a **cluster point** $\Leftrightarrow \forall \delta > 0$, $B_\delta(a)$ contains **infinitely** many points.

Definition (Relative Ball).

Let $E \subseteq X$ be a **subspace** of X . An **open ball** in E centred at a is defined as

$$B_r^E(a) := \{x \in E : \rho(x, a) < r\}$$

and as metric on X and E are the same, is of the form

$$B_r^E(a) = B_r(a) \cap E$$

where $B_r(a)$ is an open ball in X . $B_r^E(a)$ is called **relative ball** (in E). The case with closed balls is analogous.

Definition [Wade 10.25].

Let $a \in X$ be a **cluster point** and $f : X \setminus \{a\} \rightarrow Y$. Then $f(x) \rightarrow L$ as $x \rightarrow a \Leftrightarrow \forall \varepsilon > 0 \exists \delta > 0$ s.t.:

$$0 < \rho(x, a) < \delta \Rightarrow \tau(f(x), L) < \varepsilon.$$

Definition [Wade 10.27].

Let $E \subseteq X$, non-empty, and $f : E \rightarrow Y$.

- i) f is **continuous at point** $a \in E \Leftrightarrow \forall \varepsilon > 0 \exists \delta > 0$ s.t.
$$\rho(x, a) < \delta \text{ and } x \in E \Rightarrow \tau(f(x), f(a)) < \varepsilon.$$
- ii) f is **continuous on E** $\Leftrightarrow f$ **continuous for every $x \in E$** .
N.B.: This is valid whether a is cluster point or not.

Definition (Isolated Points).

Let (X, d) be a metric space, $a \in X$. Then a is **isolated** if $\exists r > 0$ s.t. $B_r(a) = \{a\}$.

Definition (Strong Equivalence).

Two metrics d and ρ on X are **strongly equivalent** if $\exists A, B$ s.t.

$$\begin{aligned} d(x, y) &\leq A\rho(x, y) \\ \rho(x, y) &\leq Bd(x, y), \quad \forall x, y \in X. \end{aligned}$$

Definition (Equivalence).

Two metrics d and ρ on X are **equivalent** if $\forall x \in X, \varepsilon > 0 \exists \delta > 0$ s.t.

$$\begin{aligned} d(x, y) < \delta &\Rightarrow \rho(x, y) < \varepsilon \text{ and} \\ \rho(x, y) < \delta &\Rightarrow d(x, y) < \varepsilon \end{aligned}$$

Topology

Definition [Wade 10.33].

Let X be a metric space and $E \subseteq X$.

- i) The **interior** of E is the set
$$E^\circ := \bigcup \{V : V \subseteq E \text{ and } V \text{ open in } X\}.$$
- ii) The **closure** of E is the set
$$\bar{E} := \bigcap \{B : B \supseteq E \text{ and } B \text{ closed in } X\}.$$

Definition [Wade 10.37].

Let $E \subset X$. The **boundary** of E is the set

$$\partial E := \{x \in X : \forall r > 0, B_r(x) \cap E \neq \emptyset \text{ and } B_r(x) \cap E^c \neq \emptyset\}.$$

Definition [Wade 10.41].

Let $\mathcal{V} = \{V_\alpha\}_{\alpha \in A}$ be a **collection of subsets** of metric space X and let $E \subseteq X$.

- i) \mathcal{V} **covers E** (\mathcal{V} is a **covering** of E) \Leftrightarrow

$$E \subseteq \bigcup_{\alpha \in A} V_\alpha.$$

- ii) \mathcal{V} is an **open covering** of $E \Leftrightarrow \mathcal{V}$ **covers E** and each V_α is **open**.

- iii) Let \mathcal{V} be a **covering** of E . \mathcal{V} has a **finite/countable subcovering** \Leftrightarrow there is a **finite/countable** subset $A_0 \subseteq A$ s.t. $\{V_\alpha\}_{\alpha \in A_0}$ **covers E** .

Definition [Wade 10.42].

Let $H \subseteq X$ with X being a metric space. H is **compact** \Leftrightarrow **every open covering** of H has **finite subcover**.

Definition 10.4.10a.

$E \subseteq X$ is **sequentially compact** \Leftrightarrow every sequence (x_n) in E has a **convergent subsequence** with limit in E .

Definition [Wade 10.53].

Let X be a metric space.

- i) A pair of **non-empty open** sets U, V in X **separates X** $\Leftrightarrow X = U \cup V$ and $U \cap V = \emptyset$.
- ii) X is **connected** $\Leftrightarrow X$ **cannot** be **separated** by **any pair** of open sets U, V .

Definition [Wade 10.54].

Let X be a metric space and $E \subseteq X$.

- i) $U \subseteq E$ is **relatively open** in $E \Leftrightarrow \exists V \subseteq X$, s.t. V **open** and $U = E \cap V$.
- ii) $A \subseteq E$ is **relatively closed** in $E \Leftrightarrow \exists C \subseteq X$, s.t. C **closed** and $A = E \cap C$.

Contraction Mappings

Definition (Contraction).

Let (X, d) be a metric space. A function $f : X \rightarrow X$ is a **contraction** if $\exists \alpha$ with $0 < \alpha < 1$ s.t.:

$$d(f(x), f(y)) \leq \alpha d(x, y), \quad \forall x, y \in X.$$

Constant α is called the **contraction constant** of f .

Definition (Fixed Point).

Let $f : X \rightarrow X$. If $x \in X$ is s.t. $f(x) = x$, then x is a **fixed point** of f .
